

NTG Invests in Future-Proof Cable Storage at Grenaa Port

Grenaa, 18 June 2026

NTG is excited to announce significant investments in expanding our cable storage solutions at Grenaa Port, Denmark, strategically located near both the North Sea and the Baltic Sea, and near several submarine cable factories.

With flexible berthing options and a range of storage methods - including cable drums, ground storage, baskets, and a state-of-the-art 10,000-ton turntable - we are ready to support both short- and long-term cable storage needs for our partners, positioning NTG CST as a one-stop shop and a professional, competitive partner for our clients.

Our new shoreside turntable, designed for non-coilable cables, will be available from the end of 2026, further enhancing our capacity and operational flexibility. This investment underscores NTG's commitment to delivering tailored, efficient, and reliable logistics solutions for the energy and infrastructure sectors.

We look forward to welcoming new and existing customers to Grenaa Port as we continue to adapt and innovate to meet your needs.

For more information or to discuss your cable storage requirements, please contact:
